Press Release – 3 New TM-100 Open Width Compactor Installations

Navis TubeTex has sold and shipped the new model TM-100 Open Width Compactor to 3 different customers in August 2010. The TM-100 is the newest model open width knit compactor machine from Navis TubeTex. The TM-100 production speed of over 40 meter per minute and compaction over 25% represent the further development of TubeTex's patented roll compaction technology.

Alexander Clothing in Egypt has received and installed the first TM-100 Open Width Compactor in the country and has all the latest developments and options. The machine is complete with the No Tension Entry, High Capacity Compaction Station and a Non-Stop Automatic Batcher. TM-100 represents a quality improvement for Alexander Clothing for difficult and sensitive fabrics to better control shrinkage and weights.

Thirumala Knit Finisher in India has received and installed the latest TM-100 in India. The machine is complete with the No Tension Entry, Pin Tenter Entry, High Capacity Compaction Station and a Non-Stop Inspection Batcher. TM-100 represents an expansion for Thirumala Knit Finisher into more difficult and sensitive fabrics to better control shrinkage and weights over other compaction technologies. The Navis TubeTex TM-100 was chosen after extensive testing and trials on competing compaction technologies.

Guichard Romania in Romania has a TM-100 in transit to Romania and will be the first TM-100 Open Width Compactor installed in Romania. The machine is complete with the No Tension Driven A-frame Entry, High Capacity Compaction Station and a Non-Stop Automatic Batcher. The TM-100 is the second open width compactor for Guichard in Romania and represents the second TM-100 for the Guichard group. The first TM-100 was sold and shipped to the group's company in Tunisia. The success of that machine was a major factor in the newest addition.

The TM-100 has been widely accepted as the most productive and best quality open width compactor on the market. Navis TubeTex has sold and shipped over 8 TM-100 machines so far this year.
