## Press Release – Turkey Market Prefers Navis TubeTex TM-100 Open Width Compactors for Quality and Performance

Navis TubeTex has just completed an installation at Akhan Tekstil in Cerkezkoy, Turkey for a TM-100 Compactor. Akhan Tekstil selected the TM-100 after reviewing the market for shrinkage control machinery. Navis TubeTex has sold and shipped the newest model TM-100 Open Width Compactor to 3 different customers in Turkey recently. The TM-100 production speed of over 40 meter per minute and compaction over 25% represent the further development of TubeTex's patented roll compaction technology.

“Navis TubeTex is the preferred machinery supplier for shrinkage control in Turkey over other machinery companies because we are able to delivery superior machinery that performs as we promise. That is not the case with some other suppliers.” stated Mr. Jeffrey Dixon, Senior Director, International Sales for Navis TubeTex.

Factors that have made Navis TubeTex the preferred shrinkage control system for knits are:

1. Highest Quality Fabric Production
2. Lowest Maintenance Cost
3. Easy of Operation
4. Local Service Availability
5. Highest Machinery Technology
6. Strength of Materials and Build Quality

The TM-100 has been widely accepted as the most productive and best quality open width compactor on the market. Navis TubeTex has sold more than 30 machines operating in Turkey currently.
