

Navis TubeTex announces large sale to Pakistan

Navis TubeTex has announced that Masood Textile Mills of Pakistan has purchased the entire line of products being displayed at ITMA 2011. Masood has purchased the open width compactor, the all new Pak-Nit e3 Gemini two station tubular compactor, and the newly released CQC (Constant Quality Concentration) system. The CQC system being launched at ITMA is a revolutionary system to control pad bath concentrations with never before seen accuracy. The benefits of the CQC system include cost savings through lower chemical and energy usage as well as quality improvement by applying the precise level of chemical required on to the fabric being processed. The CQC system can also be utilized in any application where precise chemical concentration control is critical.

Masood Textile Mills, based in Faisalabad, is the largest knitwear exporter in Pakistan. Masood boasts a blue chip customer base including JC Penny, Kohl's, Macy's, Russell, Tommy Hilfiger, and Abercrombie & Fitch. Masood chose to purchase the Navis TubeTex compactors due to the stringent shrinkage and quality requirements from their customers. Navis TubeTex compactors remain the world gold standard for shrinkage control in both tubular and open width knit fabrics.

The all new Pak-Nit e3 Gemini tubular compactor is being introduced for the first time at ITMA 2011. The Gemini model is a two station compactor that has been developed for increased compaction, speed, and improved quality and lower overall energy consumption. The Gemini is the fastest compactor ever manufactured with running speeds of over 80 meters per minute.
